Introduction

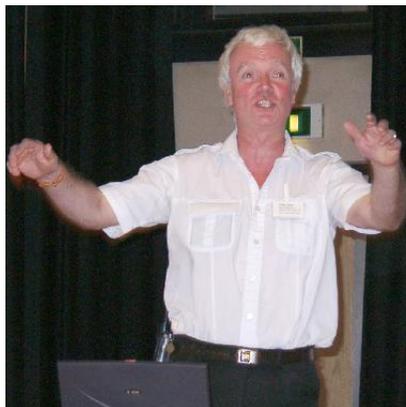

It is an enormous pleasure and privilege to be able to present this paper on $\mathcal{N}\mathcal{T}\mathcal{S}$ at a TUG conference in Oxford. For almost ten years, $\mathcal{N}\mathcal{T}\mathcal{S}$ has slowly been evolving from a concept to a reality, and I am delighted to be able to report that $\mathcal{N}\mathcal{T}\mathcal{S}$ is virtually complete. The fact that we have reached this point is due almost entirely to the efforts of one man: my co-presenter, Karel Skoupy. Karel has worked tirelessly on this project, and without his efforts I have no hesitation in saying that we would not be presenting $\mathcal{N}\mathcal{T}\mathcal{S}$ as a success story today.

Let me start by presenting an overview of today's talk and presentation; We will attempt to cover seven separate areas, including (of course) the mandatory questions and answers at the end. The seven areas to be covered are:

- A brief history of $\mathcal{N}\mathcal{T}\mathcal{S}$
- TEX , $\varepsilon\text{-T}\text{E}\text{X}$ & $\mathcal{N}\mathcal{T}\mathcal{S}$ compared
- The choice of Java as the language of implementation
- An overview of the classes, object and methods of $\mathcal{N}\mathcal{T}\mathcal{S}$
- A summary of the *status quo*
- A demonstration of $\mathcal{N}\mathcal{T}\mathcal{S}$, and comparison with TEX
- Questions & answers

and you will soon realize that my expertise lies very much in the earlier areas; the *implementation details* of $\mathcal{N}\mathcal{T}\mathcal{S}$ are very much Karel's area, and I will defer to him whenever any explanation of a detailed implementation issue is called for.

Phil Taylor

* The present authors would like to record their grateful thanks to all members of the $\mathcal{N}\mathcal{T}\mathcal{S}$ and $\varepsilon\text{-T}\text{E}\text{X}$ teams, past and present, without whom neither this paper nor $\mathcal{N}\mathcal{T}\mathcal{S}$ itself could have ever come to fruition. A further debt of gratitude is owed to GUT, in whose *Cahiers GUTenberg* an earlier version of this article first appeared. And, most importantly of all, we would like to thank the sponsors of the $\mathcal{N}\mathcal{T}\mathcal{S}$ project, both private and corporate, without whose financial support the project could never have succeeded.
