Table of Notation			xi				
Picture Gallery			xv				
Acknowledgments Preface to the Second Edition Introduction			xvii xix xxi				
				Ι	Basi	ic Techniques	3
				1	Che	opped Lattices	5
	1.1	Basic definitions	5				
	1.2	Compatible vectors of elements	7				
	1.3	Compatible vectors of congruences	8				
	1.4	From the chopped lattice to the ideal lattice	10				
	1.5	Sectional complementation	11				
<b>2</b>	Boolean Triples		15				
	2.1	The general construction	15				
	2.2	The congruence-preserving extension property	18				
	2.3	The distributive case	20				
	2.4	Two interesting intervals	21				
3	Cubic Extensions		29				
	3.1	The construction	29				
	3.2	The basic property	31				

## x Contents

4	Special Concepts	<b>35</b>
	4.1 Elements and lattices	35
	4.2 Direct and subdirect products	36
	4.3 Polynomials and identities	39
	4.4 Gluing	42
	4.5 Modular and distributive lattices	46
	4.5.1 The characterization theorems	46
	4.5.2 Finite distributive lattices	47
	4.5.3 Finite modular lattices	48
5	Congruences	51
	5.1 Congruence spreading	51
	5.2 Prime intervals	54
	5.3 Congruence-preserving extensions and variants	56
6	Planar Semimodular Lattices	61
	6.1 Slim lattices, the basics	64
	6.2 Construction with forks	70
	6.3 Construction with resections	74
	6.4 Rectangular lattices	76
II	Basic Techniques	81
7	Chopped Lattices	83
	7.1 Basic definitions	83
	7.2 Compatible vectors of elements	85
	7.3 Compatible vectors of congruences	86
	7.4 From the chopped lattice to the ideal lattice	88
	7.5 Sectional complementation	89
8	Boolean Triples	93
	8.1 The general construction	93
	8.2 The congruence-preserving extension property	96
	8.3 The distributive case	98
	8.4 Two interesting intervals	99
9	Cubic Extensions	107
	9.1 The construction	107
	9.2 The basic property	109
