

T_EX Live Version 20080822

T_EX Live is the T_EX - Version of TUG (T_EX - User - Group) and consists of all the known T_EX - Distributions and the on CTAN uploaded Packages and Documentations. Next to this there are also Documentations in T_EX Live for Beginners and Advanced.

The Installer works for Linux, MacOS X and Windows. The complete Software follows the rules of the Free Software Foundation, that you can read under <http://www.gnu.org/philosophy/free-sw.html>, and the Debian Free Software Guidelines, that you can find under http://www.debian.org/social_contract#guidelines.

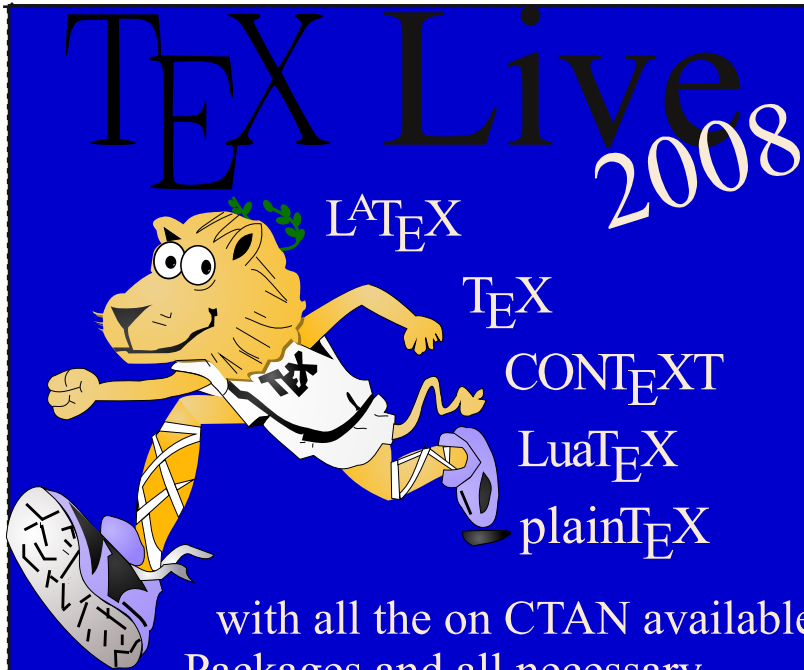

That all means, that all stuff on this DVD is free of usage, copicing, modifieing and distribution, as long as the source is freely available. The license of T_EXlive can be found unter <http://www.tug.org/texlive/LICENSE.TL>.

Usage of T_EX Live-Portable

For a Live-Version of T_EX Live close the autostarted program and change to your DVD-Drive, where in the root-dir you will find the program "tl-portable.bat".

If you want a portable Version on a USB-Stick, you need a 4 GB great USB-Stick, on which you copy all files from the DVD, and please consider that the folder-structure has to stay the same. Then open with an Editor (i.e. Notepad) hte autrun.inf-file on the USB-Stick and change in the OPEN-line the entry "install-tl.bat" to "tl-portable.bat" and save the file, now T_EX Live starts by connection of the USB-Stick automatically

When you start the portable Version from DVD, T_EX Live creates a configuration-folder on your PC, by the USB-Stick-Version this configuration will be saved on the stick itself.
