

Keyboard shortcuts for T_EXworks

A. Delmotte

Here the keyboard shortcuts used in T_EXworks. “built-in” is the normal shortcuts without localization; “French” the shortcuts I proposed in the French localization, “OOo” and “Windows” the one from OpenOffice Writer and Microsoft Word. “_” means “the same”, “NA” : “not available”.

It should be noted that Writer and Word are not text editors for programming, so many useful shortcuts for editing are not present. For search/replace in Writer everything is under **Ctrl+F**; for Writer and Word, search again is in the dialog box for search.

Some of the propositions for French are necessary because some characters (\backslash [\[]\{]) are obtained using **AltGr**¹ and another key. So for example **Ctrl+** is impossible because it would be equivalent to **Ctrl+Ctrl+Alt<**. This could also be the case for other languages, like Italian.

For the work in the editor:
