$$\oint E\,ds = 0 \qquad (1.a) \qquad \nabla \cdot B = 0 \qquad (1.b)$$

$$a = \frac{c}{d} \qquad (2.a) \qquad b = 1 \qquad (2.b) \text{ And}$$

$$c = 1 \qquad (3.a) \qquad \int 2x\,dx = x^2 + C \qquad (3.b)$$

again a default display equation:

$$F(x) = \int_0^\infty \frac{1}{x}\,dx \qquad (4)$$

A Reference to Eq. 1.b and 3.a …
