Abstract

The quality of a presentation can be improved by using a decent visualization of the content. For this purpose ConT_EXt comes with a bunch (currently there are some 25) of presentation styles. In this talk I will demonstrate how you can use T_EX to structure your presentation in such a way that it suits the topic and way you think. I will show that the combination of structure and high end typesetting will give your presentations the finishing touch they deserve. Although making presentations can be done with any T_EX, I will discuss the power of coupled ConT_EXt and pdfT_EX.
