7.2 – Comments 21

1 – Introduction

- This is not very difficult to add a navigation panel in one side of the screen. As examples, study the codes of the two panels used here.
- In fact, here too you are mainly limited by your imagination and your (LA)TEX programming skill
- Again, take care if you want to use some external images for buttons (here like for the second navigation panel and for the vertical navigation bar). If the compiler or converter that you use to produce the PDF files repeat the insertion of the graphics file, you can generate huge resulting files.
- You can add some sophistications (as here for the horizontal navigation bar, as you can see on the last slide, to inhibit some buttons when they will be unavailable on the required page)
- Nevertheless, don't forget that the PDF files have also the bookmarks and thumbnails facilities, available too in full screen mode using function keys (F5 for bookmarks and F6 for thumbnails)
