

Bugs:

- you get no lucida at all unless you explicitly change to T1. While this is somewhere documented as an example how to use the packages it is a) not easy to find and b) it should better be forced or result in an error OT1 ... no good
- typewriter is broken without a warning
- you get CM "a" in  $\mathrm{}$  (OT1 issue)
- you get no bold version even though it is there (expert issue)
- you get a broken overarrow (redef of relbar issue)

$a \leftarrow b \quad \vec{x}$   
 $\mathbf{a} \leftarrow \mathbf{b} \quad \vec{\mathbf{x}}$
