Preface

This is my first test using the **eplain** macros to manually create a ToC. As you can see, the Preface is **not** numbered.

A Normal Section

This is a typical, numbered section. Many documents will have both numbered and unnumbered sections.

Results

The ToC is created without error, but output is not as expected! Clearly, I have much to learn. Furthermore, using `\writenumberedtocline` causes an error: “TeX capacity exceeded, sorry!” on second compile.

Alternate ToC Command

This won't appear in the ToC unless you uncomment the line above. It causes an error! I must stick with `\writenumberedtocentry` and `\writetocentry`.
