
Hi folks

I have a table that is constructed in the tabular environment and comprises 34 rows. At present it requires two A4 pages. I'm wondering if there is a way of squeezing the data into one a4 sheet. I have `\documentclass[a4paper, 10pt]{article}` starting the code. Other than that there are no special packages or macros in the code.

Any help would be most appreciated.

Thank you

Paul
