

TexWorks Apostrophe Alteration

Example of alteration of ' (apostrophe)

APOSTROPHE is hex code 27 in both ascii and utf-8.

```
// app/Model/User.php
App::uses('AppModel', 'Model');

class User extends AppModel {
    public $validate = array(
        'username' => array(
            'required' => array(
                'rule' => array('notEmpty'),
                'message' => 'A username is required'
            )
        ),
        'password' => array(
            'required' => array(
                'rule' => array('notEmpty'),
                'message' => 'A password is required'
            )
        ),
        'role' => array(
            'valid' => array(
                'rule' => array('inList', array('admin', 'author')),
                'message' => 'Please enter a valid role',
                'allowEmpty' => false
            )
        )
    );
}
```

End of apostrophe alteration example.
