

LISP on T<sub>E</sub>X

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

# LISP on T<sub>E</sub>X

A LISP Interpreter Written Using T<sub>E</sub>X Macros

HAKUTA Shizuya

The 34th Annual Meeting of the TeX Users Group, 2013

# Background

LISP on T<sub>E</sub>X

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

- Writing T<sub>E</sub>X macros is useful.
  - e.g. Calculating some small numeric expressions.
- However, it is difficult for novice users.
  
- To improve, there are some researches that combine T<sub>E</sub>X and another programming language.

# T<sub>E</sub>X with Other Languages

LISP on T<sub>E</sub>X

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

Pakin[TUGboat '03] showed four way to connect T<sub>E</sub>X and a foreign programing language;

- 1 using `\write18` to call an outer processor,
  - python package (CTAN:macros/latex/contrib/python)
- 2 embedding an interpreter in a T<sub>E</sub>X engine,
  - LuaT<sub>E</sub>X (CTAN:systems/luatex)
- 3 constructing macros that enable L<sup>A</sup>T<sub>E</sub>X to communicate with an external interpreter,
  - PerLT<sub>E</sub>X (CTAN:macros/latex/conrtib/perltex)
- 4 creating a language processor with T<sub>E</sub>X macros
  - L<sup>A</sup>T<sub>E</sub>X3 project created expl3: a new interface of T<sub>E</sub>X macros, but **no ordinary language was implemented.**

# The Goal and the Mean

LISP on T<sub>E</sub>X

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

Our goals are

- Implementing a language's interpreter with T<sub>E</sub>X macros, and
- Comparing its performance with other approaches.

We take two design choices;

- 1 Choosing LISP as a ordinary language, and
- 2 Creating the product as a LaTeX package.

# LISP on T<sub>E</sub>X

LISP on T<sub>E</sub>X

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

We name the our product **LISP on T<sub>E</sub>X**.

- It was already archived on CTAN and T<sub>E</sub>XLive.
  - `macros/latex/contrib/lisp-on-tex`
- We constructed all parts of LISP on T<sub>E</sub>X with T<sub>E</sub>X macros;
  - parser, recognizing LISP expressions,
  - evaluator, calculating a expression, and
  - environment, mapping symbols to LISP objects.
- The code is written with traditional TeX macros only, so it works in all L<sup>A</sup>T<sub>E</sub>X engines,
  - L<sup>A</sup>T<sub>E</sub>X, pdfL<sup>A</sup>T<sub>E</sub>X, LuaL<sup>A</sup>T<sub>E</sub>X, XeL<sup>A</sup>T<sub>E</sub>X, pL<sup>A</sup>T<sub>E</sub>X, ...

# Examples (2/2)

LISP on  $\text{T}_\text{E}\text{X}$

S. HAKUTA

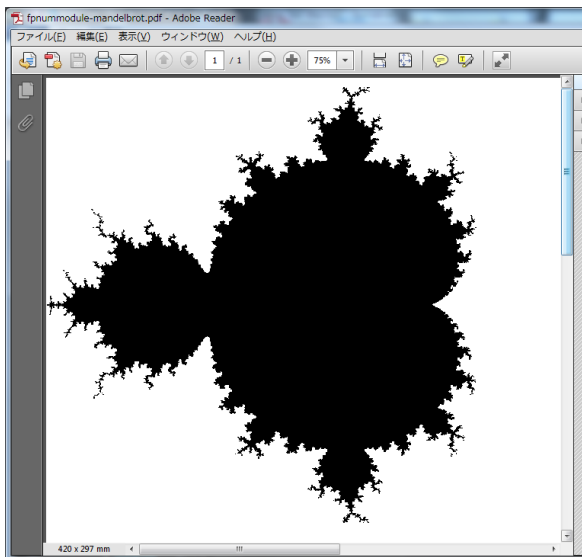

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

# Memory Management Problems

LISP on T<sub>E</sub>X

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

- LISP on T<sub>E</sub>X uses a lot of memory.
  - Yato showed that LISP on T<sub>E</sub>X stalls when using a lot of LISP objects<sup>1</sup>.
- It is caused by spending a lot of control sequences.
- Building a garbage collection system is one of our future work.

# Comparison to other approaches

LISP on T<sub>E</sub>X

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

We compared LISP on T<sub>E</sub>X and other approaches by three benchmarks.

- CPU Core i7 2.2GHz, 8GByte Memory, W32TeX

	tarai[sec]	asterisks[sec]	Mandelbrot[sec]
LISP on T <sub>E</sub> X	13	$1.6 \times 10^2$	$2.1 \times 10^4$
PerlT <sub>E</sub> X	1.0	1.0	$1.6 \times 10^2$
LuaT <sub>E</sub> X	0.45	0.55	7.6
T <sub>E</sub> X macros	0.24	0.22	$1.2 \times 10^2$
expl3	1.1	1.0	$5.7 \times 10^3$

- It shows that LISP on T<sub>E</sub>X is too slow... :-(
  - It is caused by reading T<sub>E</sub>X tokens repeatedly.
- ⇒ We can make LISP on T<sub>E</sub>X faster with improving the code.

# Conclusion

LISP on T<sub>E</sub>X

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

- We implemented LISP on T<sub>E</sub>X, a LISP interpreter written only with T<sub>E</sub>X macros.
- It works well, but the product has problems about memory usage and speed.

# Why LISP is Selected?

LISP on TeX

S. HAKUTA

Introduction

Goal and Mean

LISP on TeX

Comparison

Conclusion

There are two reasons why we select LISP.

- 1 LISP is Turing complete, so it contains all essence of programming languages.
- 2 Because LISP has simple syntax and semantics, we can implement LISP easily.
